Legal disclaimer
ALSVH is happy to offer information relating to PRP on the basis that it is not responsible for any adverse outcomes as a result of trying PRP/O-shot. The internet and online forums contain many helpful testimonies to the success of this treatment, that has been used in other conditions with real success over a long period of years. People are desperate to find help when other treatments have failed. At a recent Symposium in Oxford (2019) delegates were advised to offer patients full information about the number of platelets used in your treatment and to inform you of any risks. Consult your regular doctor.
